2- Ali is writing a research report about spiders and came across a source. Read the source and select one claim that Ali makes that is NOT supported by reliable verification.

Spider silk, spun into beautiful webs to trap insects for food, is fascinating. This silk features several unique qualities. According to the National Nature Project, spider silk is stronger than steel, by weight, and yet it is more elastic than a rubber band. Scientists study spider silk because they hope to create materials with similar properties. Researchers at Utah State University are attempting to create synthetic spider silk for uses such as replacements for plastics and stronger airbags in cars. According to a man who makes online videos about current events, though, synthetic spider silk will probably take another twenty years to develop.
